#### ABSTRACT

The paper considers the issues, decisions, and practices involved in evaluating the Technical Assistance Development System (TADS), a project to provide assistance to demonstration projects and start education agency grantees in the Handicapped Children's Early Education Program. Section 1 considers the focus for the evaluation in terms of its purposes (including providing ongoing feedback regarding the delivery and quality of individual technical assistance services), audiences and their information needs, the nature of the program being evaluated, and implication of the focus for the evaluation design. It is pointed out that the purposes of the evaluation made it necessary that the design include inquiry into four areas--the TADS contract, individual technical assistance services, all other services provided by TADS, and topics about which the staff wish to know more. The evaluation design is explained in aother section. Considered are the evaluation questions and criteria, the inquiry approach, data collection procedures, data analysis procedures, and reporting. Finally, the organization, constraints, and supports of the evaluation are discussed. Appended materials include forms summarizing technical assistance services, needs assessment and evaluation instruments, and a TADS end of year survey form. (SW)

Managing Editor: Kenn Goin Typist: Laurie Modin Summer 1981

This Occasional Paper (number 4) was prepared for our colleagues and others interested in the diverse ideas and practices of technical assistance. This material reflects some of what TADS has learned through its ten years of providing support services to model demonstration projects and state education agency grantees of the Handicapped Children's Early Education Program (HCEEP). This program is administered by the Office of Special Education, OSERS, U.S. Department of Education.

TADS provides technical assistance to designated projects and states when it is requested and needed. TADS is a division of the Frank Porter Graham Child Development Center, University of North Carolina at Chapel Hill. It is located at 500 NCNB Plaza, Chapel Hill, NC 27514. Our phone number is (919) 962-2001.

ERIC

What information should be gathered to evaluate technical assistance?

who should provide the information?

How can a technical assistance agency which provides a helping service also evaluate the effectiveness of that service?

What resources are needed to conduct an evaluation of technical assistance?

These questions are examples of the types of issues confronted in designing and implementing evaluations of technical assistance (TA).

Unfortunately, when such issues surface, there is little in the literature on evaluation concepts and experiences to guide technical assistance agency staffs.

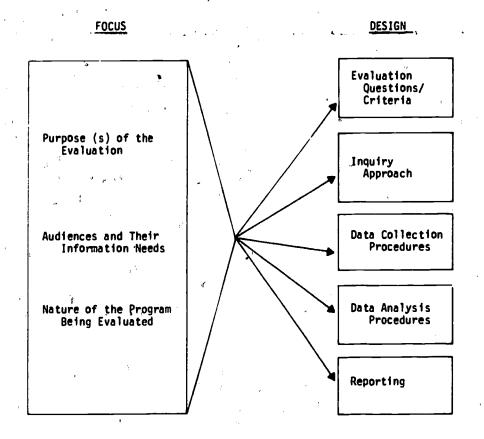

One way to begin answering these questions is for TA providers to share. information on the evaluation of their services. This may include defining issues, solutions, and practices. When identified and analyzed, strengths and weaknesses, or successes and problems, can be used to crystallize concepts and develop models that may be used by the whole TA field.

It is the purpose of this paper to contribute to this process of sharing by presenting the issues, decisions, and practices which have been parts of pne technical assistance agency's experience -- the Technical Assistance

Development System (TADS). The evaluation described in the following pages has been developed and used over the past five years as TADS provided assistance to demonstration projects and state education agency grantees in the Handicapped Children's Early Education Program (HCEEP).

Technical assistance agencies vary from each other in terms of client groups, purposes, and methods of providing services. Nonetheless, they are all likely to encounter program evaluation issues that are similar. To help the read compare his or her experience with our's, the evaluation of TADS is described according to a general model for evaluation (see Figure 1).

FIGURE 1
Elements of a Program Evaluation Design

#### **FOCUS**

An oversight or omission in much evaluation work is a clear specification of focus. To avoid the problems that an inadequate focus creates for an evaluation (e.g., the choice of inappropriate instruments, poor timing of evaluative events, etc.) and to achieve a consensus on an evaluation approach among staff members, considerable time and effort were spent in clarifying the focus for the evaluation of TADS. The results of the discussions to determine the focus, which sometimes were heated but always enlightening, are described be

#### Purposes of the Evaluation

The evaluation of TADS was designed to be both formative (to improve the technical assistance system) and summative (to demonstrate its overall effectiveness or worth). Specific purposes of the evaluation were:

- 1. To determine if objectives for implementing the TA system as stated in its contract had been achieved;
  - 2. To provide ongoing feedback regarding the delivery and quality of individual TA services;
  - 3. To determine the overall effectiveness of the TA as designed and delivered by TADS; and
  - 4. To generate new knowledge regarding the nature and processes of technical assistance.

#### Audiences and Their Information Needs

The purposes for the evaluation of TADS, to a large extent, grew out of the evaluation information needs of its audiences. The audiences for the evaluation were:

- TADS staff
- Office of Special Education (OSE) staff (OSE, TADS federal contracting agency, is part of the U.S. Education Department.)

5

- 3. Frank Porter Graham Child Development Center (FPG) staff (FPG is located at the University of North Carolina and is the administrative agency for TADS.)
- 4. TADS professional colleagues (e.g., other technical assistance agencies, special educators, medical personnel, and state education department personnel.)

To improve the TA system, <u>TADS staff members</u> needed continuous feedback regarding individual TA services and periodic feedback on the overall status and effectiveness of all services provided. To manage the TADS contract effectively, information was needed on the accomplishment of administrative objectives. Finally, staff members were interested in learning more about the process being used, so successes could be shared with other professionals and problematic processes could be changed, modified, or terminated.

OSE staff members needed information about the status of TADS activities and the accomplishments and quality of the technical assistance provided to clients. Because OSE funds several technical assistance programs, the agency also was interested in receiving any results which provided new insights about TA.

It was assumed that the <u>leadership of FPG</u> would be interested in the successful completion of the TADS contract and the effectiveness of the TA system. The JADS staff also believed that <u>colleagues at FPG</u> and <u>other TA practitioners</u> would be interested in new knowledge, insights, or practices discovered or developed as a result of TADS experience in providing technical assistance.

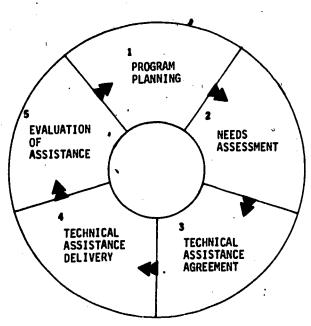

#### Nature of the Program Being Evaluated

TADS. The elements of a technical assistance system most directly affecting its evaluation are: (a) its goals; (b) the approach used to achieve the goals; and (c) the types of services provided (Suarez, 1980).

The overriding goal of TADS is to assist in and enhance the overall development of the HCEEP programs for which its clients (the leadership and staffs of HCEEP funded programs) are responsible. To accomplish this goal, TADS offers assistance in the early-childhood-special-education content areas in which the clients are working and in the overall organization, administration, and operation of client programs.

The attitude or philosophy toward technical assistance taken by TADS is that it should be supportive, responsive, interpersonal, and nonevaluative. TADS provides assistance to clients within the framework of a particular, systematic, yearly process focused on specific early-childhood-special-education content areas. The process itself consists of five distinct, cyclical stages: (1) program planning; (2) formal, total-program needs assessment; (3) development of an agreement between the client and TADS for work that is needed to accomplish identified TA needs; (4) delivery of the technical assistance; and (5) evaluation of the services. (See Figure 2.)

• FIGURE 2
The TADS Process of Technical Assistance

TADS provides a comprehensive and varied form of (a) in-field,

(b) in-house, and (c) in-print services (Lillie and Black, 1975) to meet the overall goal of program development and the specific client needs identified during the needs assessment. These services are designed to create awareness, aid in program planning, enhance skills, or aid in the actual development or implementation of the program. The technical assistance services commonly offered by TADS are: on-site and off-site consultations, information searches, visits to exemplary programs, reviews and critiques of plans and products, small and large group workshops, a quarterly newsletter, and publications on topics of concern to clients.

TADS Clients and Their TA Needs. The primary client groups served by

TADS are well defined. The funding source restricts direct TA services to:

(a) three-year demonstration projects; and (b) state education agency grantees which are planning statewide comprehensive services for preschool handicapped children and their families.

The demonstration projects have similar overall purposes, and their staff members work in some of the same general areas. The states, on the other hand, share the general goal of developing and/or improving services to preschool handicapped children and their families, but they vary considerably from the projects in the efforts they undertake to accomplish this goal.

Through experience, TADS has identified the major categories in which most client needs fall. Demonstration projects most often need help in the content areas of: services for children, services for parents, staff development, demonstration/dissemination, administration/management, and program evaluation. Needs of state education agencies vary more from grantee to grantee, but they include areas such as: statewide planning, developing interagency agreements, in-service training, teacher certification, and

.

projects and states need assistance in decision-making, planning, obtaining information, developing skills and competencies, developing specific materials or procedures, and revising and refining existing materials or procedures.

### Implication of the Focus for the Evaluation Design

Clarification of the focus of the evaluation provided TADS with two things that were very important. First, the clarification process itself provided a vehicle for involving staff members in the evaluation and encouraging their commitment to it. Second, clarifying the focus provided information which could be used to tailor the evaluation to TADS specific needs. By examining Figure 3, the reader can begin to see how the design needed to be shaped (on the basis of focus) to encompass and address TADS needs.

The <u>purposes</u> for the evaluation made it necessary that the design include inquiry into four, somewhat distinct, areas: the TADS contract, individual TA services, all other services provided by TADS, and topics (regarding the provision of technical assistance) about which the staff wished to know more.

The <u>audiences</u> for the evaluation and their information needs affected the type and timing of evaluation reports. The TADS staff needed ongoing, periodic, and summary (yearly) information. The funding agency required information relative to the contracts. Reporting mechanisms for providing this information (Quarterly Progress Letters) were specified in TADS contract with OSE. OSE and FPG needed the same summary information provided to the TADS staff. All audiences needed reports of special studies on technical assistance as they were developed.

The goals and philosophy of TADS suggested further considerations for

#### Focus of the TADS Evaluation

## FOCUS -

#### PURPOSES OF THE EVALUATION

- 1. Determine if contracted objectives were met
- 2. Provide ongoing feedback to the TADS staff regarding the technical assistance provided
  - 3. Determine the overall effectiveness of TADS
  - 4. Generate new knowledge regarding technical assistance

#### **AUDIENCES**

#### THEIR INFORMATION NEEDS

1. TADS staff:

Status of contract, delivery and quality of individual technical assistance services, overall effectiveness of TADS technical assistance, new knowledge regarding the delivery of technical assistance

2. Funding agency (OSE):

Status of contract, effectiveness of TADS as a provider

of technical assistance

Administrative agency (FPG):

Overall effectiveness of TADS technical assistance, new knowledge regarding technical assistance

new knowledge regarding technical assistance

4. Other technical assistance New Knowledge regarding technical assistance

professionals:

#### NATURE OF THE PROGRAM BEING EVALUATED

- 1. TADS
- a. Goal: Enhance development of client programs
- b. Approach:
  - (1) Attitude--Responsive, supportive, nonevaluative
  - (2) Structure--Systematic, individualized, client-staff oriented
  - (3) Types of services--In-house, in-field, in-print
- 2. Clients (HCEEP funded demonstration projects and State Implementation Grants)
  - a. Goals

Create, develop, and/or implement model services for preschool handicapped children and their families

b. Technical assistance needs:

Specific content areas in the field of early childhood special education, program development processes and procedures

1)

the evaluation. First, the overall goal of TADS and the focus of its services required that the evaluation concentrate on variables related to the organizational and programmatic development of the client programs. TADS philosophy required that the evaluation be nonevaluative of the client and that it not interfere with the supportive, interpersonal aspects of the technical assistance.

The structure of TADS TA process (Figure 2) permitted the evaluation be systematic (across clients and client groups), but the individualized nature of the TA required that the evaluation design accommodate differences in the amount, type, and content of services that were delivered to individual clients. The variety of types of services provided to clients made it necessary to tailor data collection procedures to each specific service.

With regard to the <u>clients</u>, the evaluation needed to reflect the differences in the two primary client groups. It also had to focus on the common needs of the groups and the individual needs of the programs in each of them.

#### DESIGN

Even when the focus for an evaluation is specified, designing its specific content and procedures is not unlike putting together a puzzle containing an incomplete set of oddly shaped pieces. The focus provides the framework for the "puzzle." It shows how most of the pieces fit together. But there are some areas of the puzzle for which there are no pieces. These pieces can be located only after you have other parts of the puzzle put together and can see what is needed (i.e., after decisions regarding details are made and as other issues relative to evaluating technical assistance are confronted and resolved). The following discussion provides an explication

of the TADS evaluation design including the "missing pieces" and the ideas and strategies that were combined to provide the complete picture of the process.

#### Evaluation Questions and Criteria

On the basis of the decisions made about the focus of the evaluation, five major evaluation questions were developed. They corresponded almost directly to the purposes for the evaluation.

- 1. Has TADS fulfilled the provisions of its contract with the Office of Special Education? If not, why not?
- 2. How effective has TADS been in providing services to its clients?
- 3. How satisfactory have been the services provided to clients by TADS?
- 4. What has been the impact of TADS technical assistance on its clients?
- 5. What has been learned about technical assistance?

When specific planning began, additional questions were asked to sharpen the responses that could be given to the five major questions. These and other details of the evaluation design are outlined in Figure 4:

Criteria to determine if evaluation results were satisfactory were based on several considerations. First, the staff of TADS wished to complete all of the work in its contract with OSE. Therefore, all questions related to contract work had "successful completion of all work promised" as the criteria for a satisfactory answer. Provisions were made, however, for modifications in the contract which occur naturally as detailed planning is completed and the priorities of the contractee or funding agency change.

Second, data gathered prior to developing this evaluation system contained very high ratings of TADS services by both client groups. It was

FIGURE 4 (1974-75)
Instructions For The Needs Assessment
(Second year projects' on site needs assessment)

The enclosed materials have been prepared to assist in the assessment of technical assistance needs for HCEEP projects who are approximately mid-way in their three-year funding cycle. The expected outcomes of this needs assessment are as follows:

- To visit the project site; meet the staff and observe the program (if desired by the project director).
- To review the technical assistance services provided to the project over the last six months and report results.
- 3. To review the project's renewal proposal and plans a for the third year.
- 4. To identify the project's technical assistance needs (using the TOP).
- 5. To develop a tentative Technical Assistance Agreement.
- 6. To identify any strong components in the project that might be a resource for TADS in the future.

The contents of this needs assessment kit should include:

- 1. An information sheet on the project.
- A description of the technical assistance the project has received during the last six months.
- 3. Two copies of the TOP.
- A copy of Guidelines for Writing Technical Assistance Agreements.
- 5. Blank Technical Assistance Agreement forms.
- 6. Forms for writing the report on the needs assessment.
- 7. Travel reimbursement forms.

#### 1975-76

Two major changes in the needs assessment process occurred in 1975-76. First, TADS abandoned its request that all new projects prepare a Program Plan Outline as a needs assessment prerequisite. Getting a completed program outline from the project and sending it to the needs assessor prior to his or her visit took a disproportionate amount of time; and, in many instances, the outlines were never received or were incomplete.

In place of the plan, projects were given five workguides to complete, one each to cover Administration and Management, Staff Development, Programs for Children, Programs for Parents, and Demonstration and Dissemination Components. Each workguide contained tasks which an HCEEP project should complete as its program evolved. After completing each workguide, the project filled in a checklist on the front page giving a quick summary of the status of project development in that component. (See Figure 5 for example of Administration and Management Checklist.)

twenty people to its organization and technical assistance process and trained them in the needs assessment process: including the TOP, Program Planning Workguides, and agreement writing.

#### 1976-77

The process developed the previous year was used again in 1976-77. The TOP was expanded to assess "Staff" as well as the three original areas (see Figure 6). All first-year projects continued to receive on-site needs assessments. Variations in needs assessment procedures were tried with second-year projects: (1) conducting needs assessments by telephone and (2) offering an Evaluation Track option.

TADS decided to try telephone needs assessments for two reasons: the large number of clients and the success of the systematic approach to a needs assessment which the Program Planning Workguides (see Figure 5) and the TOP (see Figure 6) had facilitated. Six second-year projects that were meeting their goals and objectives and maintaining a positive rapport with TADS were identified. When contacted, each agreed to have a telephone needs assessment in place of an on-site visit.

The assessment materials were mailed to each project. A time for the phone call was scheduled by the TADS staff needs assessor with the project's contact person to occur, typically, after TADS received the completed Program Planning Workguides, continuation proposal, and progress report for review. The telephone needs assessment included a discussion of the reviewed material and a joint rating of the TOP. Since this was a lengthy procedure in itself, usually another phone call was scheduled to complete the needs assessment -- confirming needs, timelines, and kinds of assistance.

The Evaluation Track, which a project could choose instead of a comprehensive needs assessment, provided a yearlong series of consultations in evaluation planning. Nine second-year projects opted for this alternative in lieu of on-site needs assessments. These projects felt their "need" priority was evaluation. There was no further assessment of needs for those who chose this option. A Technical Assistance Agreement was written with each project outlining a comprehensive, on-site delivery method with an evaluation consultant.

Third-year projects were "weaned" from TADS by having the option of attending a topical conference in Demonstration/Dissemination Activities at TADS expense. There were no needs assessments with third-year projects.

#### 1977-78

During the spring of 1977, TADS supported an external evaluation

two third-year -- field tested the new materials. Minor modifications were made based upon the field-test experiences and the materials were prepared for use with projects.

On November 8-9, 1977, TADS held a training meeting for thirty needs assessors. Fifteen trainees were totally new to TADS needs assessment process. (See Figure 7 for agenda topics.) The purposes of the new Profile and how to use it with the projects were the primary foci of the meeting.

In mid-winter of that year, the U.S. Office of Education determined that the needs assessment forms should undergo "clearance" before their use could be required of projects. TADS immediately notified its needs assessors and clients, instructing them not to require that the forms be filled out in preparation for the assessment but to use them only for informal planning.

Since the forms-clearance process would take several months, TADS designed alternative needs assessment and technical-assistance delivery processes for second- and third-year projects. Small-group meetings on topics with which projects tended to need help were offered to all clients. They could select, via mail or telephone, two such meetings to attend at TADS expense.

These small groups each involved four to seven projects working with consultants to address areas of need. Group presentations

assumed that this phenomenon was the result of the high quality of TADS technical assistance or the natural tendency of people to rate TA types of activities quite favorably, or a combination of the two. These assumptions led to the selection of <u>above average results</u> as the criteria for acceptable responses by clients and TA providers regarding the quality of services delivered.

Finally, some of the questions required descriptive rather than evaluative answers. These questions were designed to obtain information that would provide the basis for interpreting other results or, in the case of the research studies, new information regarding TA. It was inappropriate to assign criteria to these questions but important that the questions themselves be included.

#### Inquiry Approach

Because of the variety of information needs, no <u>one</u> inquiry approach could be used to provide the data that the evaluation questions required. Each question had to be considered for its own information needs, and an appropriate inquiry approach to those needs had to be chosen.

The first decision to be made was whether the approach required evaluation or another form of inquiry. Some questions clearly demanded an <u>evaluative</u> response. Others, as mentioned previously, required <u>descriptive</u> answers. Still others, particularly those related to discovering new knowledge, called for <u>research</u>.

Once the basic approach was determined -- description, evaluation, or research -- it was necessary to be more explicit about the type of inquiry so that data collection and analysis procedures could be chosen. For those questions that were evaluative, several types of inquiry were indicated by the questions and their criteria. Objective-based evaluation (Gallagher,

Surles and Hayes, 1972; Popham, 1972) was used to determine the accomplishment of objectives. When meeting criteria rather than accomplishing objectives was the basis for determining results, discrepancy evaluation (Provus, 1971) -- comparison of results to a previously established standard -- was used. For one of the special studies, an input evaluation approach (Stufflebeam, et al., 1971) was selected as most appropriate.

Specifying the generic type of evaluation or research needed did not, for some questions, provide sufficient guidance for the design of data collection procedures. For them, primarily those requiring information about or from the clients, additional specification was needed. In order to obtain continuous feedback from clients regarding TA services and at the same time build a data base to use for summarizing data about the total client group, a quick turn-around system of inquiry was needed. Survey research was chosen as the approach because of the speed with which information could be acquired, the systematic data it could provide, and its feasibility in terms of time and cost.

For the research studies, approaches appropriate for the specific research questions posed were used. Because there was no body of knowledge on which to base the study of TADS type of technical assistance, all of these approaches were considered exploratory.

#### Data Collection Procedures

Analysis of the information needed in order to complete the inquiries led to the development of five types of data collection procedures.

The <u>TADS Filing System</u> was established to provide a storage and retrieval system for the documents which related to the objectives in the contract. It consists of extensive files maintained by the Director of TADS and staff members who have specific responsibilities relative to the contract.

The <u>TADS Aggregate Summary Form</u> was developed to provide a system for recording and describing all services provided to clients. (See Appendix A.) Maintained by the technical assistance coordinators (the staff members at TADS who maintain liaison with clients and arrange TA services) responsible for technical assistance to clients, these forms provide information on: clients' needs, the type of assistance provided, the amount of assistance, the number of clients participating in the assistance, and the type of TA provider (e.g., a TADS staff member or an external consultant).

The <u>TA Event Evaluation Forms</u> are questionnaires designed to provide both systematic information about all services and unique information on specific types of technical assistance events. "TA events" include needs assessments and the specific services designed to meet individual technical assistance needs identified during those assessments. Forms have been developed for: consultations, reviews and critiques, visits to other programs, information searches, needs assessments, small group meetings, and workshop presentations. (See Appendix B for examples of each TA event form.)

These forms are sent to clients when the specific TA is provided. In the cases of the needs assessments and consultations, the consultant who provided the TA also receives a form. Responses on the form provide descriptive information about the event itself, about client and consultant perceptions of what the TA accomplished, and about the client's level of satisfaction with the technical assistance and its quality.

The <u>TADS End-of-Year Survey</u> is sent to clients at the completion of each cycle of TA (i.e., each year). It provides information regarding:

(1) progress toward meeting technical assistance needs, (2) the impact of the TA on programmatic and organizational areas of the client programs, and

(3) perceptions of overall satisfaction with the TA provided by TADS during

22

the year. (See Appendix C.)

Specific forms were not developed for the case study. Instead, four questions were specified to guide the <u>observations</u> and <u>interviews</u> of the external consultants (Behr, Hawes, Vandiviere, and Suarez, 1981).

#### Data Analysis Procedures

Most of the evaluation questions required that specific types of results be compared to preestablished standards or that the data provide a description of the TA as it occurred during a given year. Consequently, data analyses were needed which summarized results of TA with the total client group. The computation of summary statistics, e.g., frequencies, percentages, means, etc., is, therefore, the first step and base for most data analysis procedures used in the evaluation. These summary statistics are then compared to the preestablished criteria.

For other questions, particularly those for additional research studies, the selection of appropriate data analysis techniques was necessarily specific to the questions posed. (Refer to Figure 4.)

#### Reporting

To meet the needs and interests of the evaluation audiences, five types of written reports are prepared. The TADS staff members responsible for technical assistance (primarily the technical assistance coordinators) receive the written feedback of clients and consultants on the <u>TA Event Form</u> as it is received in the TADS offices. From the ratings and comments on the forms, they determine if the TA was perceived to be successful and, then, design appropriate followup activities.

Quarterly Progress Letters are prepared to provide a description of activities undertaken and progress made toward meeting the objectives stated

in the TADS contract. Documentation to support or further describe activities is attached. These <u>Letters</u> are sent to the TADS staff, the funding agency (OSE), and the administrative agency (FPG). They serve, for all three audiences, the purpose of providing information which can be used to manage the contract.

An <u>End-of-Year Evaluation Report</u> is prepared each year to provide information on TADS effectiveness in delivering technical assistance, the quality of the services delivered, and their impact on the clients and their programs. This report provides the TADS staff, OSE, and FPG with summary information regarding the organization's effectiveness. The information can be used to modify and improve future services.

Two types of reports furnish information to TADS audiences and the field at large on new knowledge about TA. They are <u>special reports</u> and <u>journal</u> <u>articles</u>. Special reports, i.e., reports of studies conducted to learn more about TA, are distributed to the TADS staff, OSE, FPG, and professionals in other technical assistance centers around the country. From these reports and other data gathered, journal articles are written to share the new information with a wider audience.

#### CONDUCTING THE EVALUATION

As the reader is aware, knowing what you would like to do and getting it done can be two different things. Organization, resources, and fiscal support have a great influence on the success of an evaluation. This is particularly true for new programs, such as technical assistance, for which there has been neither a history of or impetus for extensive evaluations. TADS has been fortunate in the way its organizational structure has evolved to support the evaluation process.

#### <u>Organization</u>

Because the primary audience for the evaluation is TADS staff members who need ongoing feedback to accomplish their tasks, it was determined that at least part of the evaluation should be conducted internally. From TADS earliest days, a position within the organization entitled "Associate Director of Evaluation" has existed. The importance given evaluation by the designation of a full-time administrative position with accompanying staff support and the organizational level at which the position was placed are noteworthy.

Organizationally, the evaluation section of TADS is one of four distinct operating units, the others being TA Services to Demonstration Projects, TA Services to States, and Publications. The Associate Director responsible for the evaluation is part of the management team, under the guidance of TADS Director, that comprises a fifth organizational component -- Administration.

One of the keys to the operation and success of the TADS evaluation is the data management system. A half-time data analyst and manager has the responsibility of coding, entering, cleaning, and analyzing all of the quantitative data gathered. The analyst works most of the time at the FPG data management center where all of the equipment, services, and expertise needed to store, retrieve, and analyze data are located. The analyst deliberately spends some time at the TADS offices. This arrangement allows the analyst to become familiar with the organization and to provide data services to members of the TADS staff other than those directly involved in the TADS evaluation.

At various times in its history, TADS has hired outside consultants and consulting agencies to review and aid in the design and implementation of its evaluation. Other efforts to obtain completely external evaluations of

the system have been proposed to the contracting agency, but not funded.

#### Resources for the Evaluation

As the current evaluation system has been implemented, the resources for the evaluation have increased. Currently, the resources for the evaluation of TADS include:

- 1. <u>Financial Support</u>: Funding within the contract provides for staff salaries, consultant and contractual services, supplies, and computer services.
- 2. Personnel: An equivalent of two full-time program positions are assigned to conduct the evaluation. They include the associate director, half of the time of a program evaluation specialist, and a half-time data analyst and manager. Other TADS staff members and, when needed, external consultants provide input into and/or review of evaluation activities or products. Clerical support is provided by the TADS secretarial staff and temporary secretarial service agencies.
- 3. Facilities: Office space, equipment, and facilities are provided through the contract by the University of North Carolina. TADS has access to the computer facilities of the Triangle Universities Computation Center through the data management office of FPG.

#### Constraints and Supports

In addition to resources, there are other constraints and supports which affect the evaluation of TADS.

<u>Constraints</u>. In spite of the detailed planning and resources available, there are constraints which place limits on the amount or type of evaluation that can be done.

First, most of the evaluative information gathered is client perceptions of the technical assistance. For consultations and needs assessments, perceptions of consultants are also obtained. Both perceptions of the process are valuable and should be a part of any evaluation of technical assistance. Due to cost and feasibility considerations, other perceptions. are not routinely obtained -- e.g., those of all client staff members,

operates, persons in the funding agency, TADS staff members, or external, objective observers. This limits not only the amount of information available, but also the spectrum of views which would provide a complete portrait of the technical assistance. It was for this reason that the case study was implemented. While all the perceptions listed above have not been obtained, many have been provided via the case descriptions of technical assistance to two demonstration projects. (See Behr, Hawes, Vandiviere, and Suarez, 1981.)

Related to this constraint is the known bias in the perceptions of most clients. TADS services are provided at no cost to the clients and in a supportive and responsive manner. Clients do not tend to respond negatively to free services arranged by nice people. The bias is recognized and steps are taken in the evaluation to minimize its effects: e.g., the positive end of rating scales has been expanded to permit greater discriminations. The presence of the bias, however, continues to affect the evaluation results that are obtained.

Finally, TADS commitment to being a nonevaluative source of assistance precludes direct evaluations of client program operations or progress. As a result, the scope of the evaluation is narrowed to client perceptions of progress made in only those areas in which technical assistance is provided. While definitely useful, it is recognized that assessment of the effects of the technical assistance is not as comprehensive as, in an ideal situation, it might be.

Supports. The strong support for the TADS evaluation by all who are involved has been extremely beneficial if not crucial. Administrative support and involvement at TADS, by underscoring the importance of evaluation, has made it easier to get the job done. Financial support from the funding

agency has permitted the expansion of evaluation efforts and the subsequent implementation of the evaluation described in this paper.

It is probably not possible to overemphasize the importance and value of a supportive staff to internal evaluation efforts. The interest and involvement of the TADS staff in the evaluation has led to the efficient, and comprehensive implementation of the evaluation design and noticeable improvements in data collection procedures and reports. In addition, the staff has provided the impetus for special studies by suggesting topics, aiding in their implementation, and requesting information from the evaluation unit.

Much of the data that is gathered for the evaluation comes from TADS clients and consultants. Due in large part to the rapport established by the TADS staff with the clients and the support of clients themselves, return rates for questionnaires are uniformly high and extensive feedback is provided.

#### SUMMARY

Technical assistance is, by its nature, a complex process. Evaluations of the process are therefore necessarily complex and varied because of the types of technical assistance provided. It has been the intent of TADS staff members to develop an evaluation system which addresses the complexities and the specific nature of the technical assistance they provide. The system described in this paper has been a useful one. It is hoped that by describing the system, the ideas presented can be used by other technical assistance agencies in designing their specific evaluations and by the field at large in improving the overall quality of technical assistance evaluations.

## FIGURE 15 Sample Profile Summary

#### HCEEP DEMONSTRATION PROJECT PROFILE

SUMMARY PAGE

Directions: (1) After completing the entire HCEEP Opmonstration Project Profile: A Needs Assessment Instruments, CIRCLE the numbers of each task in each program component that you indicated a desire for change in status during the current funding year.

(2) Place a "X" through any circled task number that you indicated a need for "outside" or technical assistance.

(3) Example: ① 2 3 Ø 5 ⑥ Ø 8

The Work Sheets. Each technical assistance need is recorded on a Work Sheet (Figure 16). The focus of the technical assistance, the people who will be direct recipients of the assistance, and the date by which the assistance is to be completed are all included on this form. Then this information is used to write a Technical Assistance Objective. Finally, a delivery method that addresses the need efficiently and effectively is chosen.

<u>Sequence-of-Technical-Assistance Activities</u> (Figure 17). For each delivery method listed on the Work Sheet, a Sequence form has been developed.

TECHNICAL ASSISTANCE DEVELOPMENT SYSTEM

PROJECT EVALUATION OF NEEDS ASSESSMENT

This descionnaire is designed to gather information regarding the TADS' needs assessment conducted with your project. The items are designed to provide TADS with information regarding the needs assessment procedure and your opinions regarding its quality and usefulness. The information provided by all projects will be used to determine the effectiveness of our needs assessments. YOUR RESPONSES TO ITEMS WILL REMAIN STRICTLY CONFIDENTIAL and will be reported only in combination with information gathered from other projects. We would appreciate your most honest and objective opinions. THANK YOU.

I. THE NEEDS ASSESSMENT: Listed below is a set of statements of criteria for a TADS' needs assessment.

Please rate the extent to which you believe the needs assessment of your project met the stated criteria by circling the appropriate number. For question 6, please follow the instructions given with the item:

		Not Met				Met tially	1 4 ,	Met Completely	Exceeded Stated Criterion
1.	The needs assessment provided a comprehensive review of the project.	3, I		2		3	<b>4</b>	<b>5</b>	6
2.	The needs of the project, those requiring and not requiring technical assistance, were identified.	!		2		3	4	5	6
3.	A list of clearly specified needs'to be addressed by technical assistance was developed.	1 . •		2	ı	3	4	, <b>5</b>	<b>6</b>
<b>4.</b> ,	Technical assistance activities for the needs described in Item 3 above were identified.	1	•	2	1	3	4	5 <sup>,</sup>	6
5.	Roles and responsibilities for- the project staff and TADS in planning and carrying out tech- nical assistance were clarified.	<b>1</b>		2		3	. 4	<b>,5</b>	, 6
6.	in addition to these criteria, were there other accomplishments of the needs assessment process? (please check)		<i>'</i> ,			س	· Yes	· .	Ho
	If yes, please describe:		_	,	<del>./_</del> _	1	- ;		•

TADS, UNC-Chapel Hill, 1981

35

Please rate the quality of the needs assessment manual by circling the appropriate number for each of the following Items. Place any comments you may have regarding the manual in the Section labeled "comments."

1. Clarity, i.e., extent to which contents are clear, understandable, etc.  2. Completeness, i.e., extent to to which information needed to complete the needs assessment is included, etc.  3. Format, i.e., extent to 1 2 3 4 5 6 which organization, format of the manual makes it easy to use, etc.  4. Usefulness, i.e., extent to 1 2 3 4 5 6 which the contents of the manual are of use in planning and participating in the meds assessment.  5. #### TECHNICAL ASSISTANCE DEVELOPMENT SYSTEM

#### SIG EVALUATION OF NEEDS ASSESSMENT

This questionnaire is designed to gather your opinions concerning the needs assessment conducted by TAOS with your SIG. We will use the information you provide to determine the effectiveness of our needs assessments and improve those that we may conduct in the future. We appreciate your most honest and objective opinions. THANK YOU.

INSTRUCTIONS: It would be most helpful to us if the ratings and comments on this form reflect the summary opinions of all staff members who participated in the needs assessment. We would appreciate your explanations regarding any negative opinions expressed. Please place these and other comments you would like to make in Section III at the end of the form.

1. THE NEEDS ASSESSMENT: Please rate the extent to which the following items were accomplished during the needs

1.	assessment.	Not Accomplished		Accomplished Adequately		Accomplished Very Well	Accomplished Exceptionally Well
1.	The needs assessment provided a comprehensive review of your SIG plan.	< 1	2	3	4	5	6 1
<sup>2</sup> ·	The needs of your SIG, those requiring and those not requiring tachnical assistance, were identified.	1	<b>2</b> ,	3	4	5	6
3.	A list of clearly-specified needs to be addressed by technical assistance was developed.		2	3	4	5	6 1
4.	Technical assistance activities for the needs described in item 3 above were identified.		2	3	4,	5	.6.
5.	Roles and responsibilities for your SIG and TADS in planning and carrying out	1 ;	2	<b>3</b>	4	5 ·	6

II. THE NEEDS ASSESSOR: Please circle your response to the quality of the needs assessor on each of the follow-

	4	Unsatis- factory	Below Average	Average	Good	Excel- lent	Excep- tional-

## TECHNICAL ASSISTANCE DEVELOPMENT SYSTEM

Demonstration Project/SIG<sup>#</sup> Evaluation of Consultation

PURPOSE: We would appreciate information from you and your staff concerning the recent TADS-sponsored consultation, which is described below. This form includes a series of questions and ratings which are designed to monitor and evaluate our work. Your feedback will be combined with information from other projects and SIGs to determine our current effectiveness and improve future consultations. It also will be shared with the consultant who worked with your roomments will otherwise remain confidential.

We would appreciate your honest and objective opinions. THANK YOU VERY MUCH FOR YOUR TIME AND THOUGHTFULNESS.

Demonstration Project/SIG\* Evaluation of Anformation Service

PURPOSE: We would appreciate information from you and your staff concerning the recent TADS-sponsored information service which is described below. This form includes a series of questions and retings which are designed to monitor and evaluate our work. Your feedback will be combined with information from other projects/SIGs to determine our current effectiveness and improve future technical assistance. It also will be shared with the person who provided the service. Your comments will otherwise remain confidenties.

We would appreciate your honest and objective opinions. THANK YOU VERY MUCH FOR YOUR TIME RNO THOUGHTFULNESS.

# TADS End of Year Survey

PURPOSE:

The TADS End of Year Survey is designed to determine the overall effectiveness of the technical assistance delivered to HCEEP Demonstration Projects and State Implementation Grantees (SIGs) during a calendar year. To accomplish this, the survey is structured to gather information in three areas:

- The effects of TADS' assistance on the technical assistance needs which were identified for each program during the year;
- 2. The impacts of TADS' technical assistance on each program; and
- 3. The program staff's satisfaction with the technical assistance received from TADS.

USE:

The results of the survey will be analyzed with other information provided during the year to determine the overall effectiveness of TADS. The information will be used to Improve TADS' services and report on its effectiveness to those audiences which are interested and invested in the results.

CONFIDENTIALITY:

As is TADS' standard policy, the responses to this survey will be kept strictly confidential and reported only in grouped or anonymous individual formats. Your most objective and candid assessments of the assistance that TADS has provided to your program will be appreciated.

INSTRUCTIONS:

instructions for completing the survey are given at the beginning of each of the three sections.

THANK YOU FOR YOUR COOPERATION.

Technical Assistance Development System 500 NCNB Plaza

II. IMPACTS OF TADS'TECHNICAL ASSISTANCE. Listed below are both organizational and programmatic impacts of TADS' technical assistance which have been given to us by projects in the past. Please review the items briefly to identify their differences and then determine if each impact occurred in your project AS A RESULT OF THE TECHNICAL ASSISTANCE YOU RECEIVED FROM TADS THIS YEAR.

As you determine your response please consider ALL of the technical assistance you received, e.g., needs assessment, conferences, consultations, information services, publications, etc., and not just those services stated on the previous pages. If other, impacts occurred in your project which are not listed, please list them in the spaces under the word "Other." Then rate all of the impacts by circling your response.

Organizational Impacts of TADS' Technical Assistance: These are impacts which occurred in the overall organization and operation of a project as a result of technical assistance received from TADS.

II. IMPACTS OF TADS' TECHNICAL ASSISTANCE. Please list below any impacts, either positive or negative, which you believe have occurred with your SIG AS A RESULT OF THE TECHNICAL ASSISTANCE YOU RECEIVED FROM TADS THIS YEAR.

As you will notice, the space provided for comments is divided into three different levels at which impacts of technical assistance may occur. (a) The SIG program end staff; (b) The State Education Agency; and (c) Other individuals, agencies or groups. Please select the appropriate level or levels and describe what you believe the impact of technical assistance to have been. Responses may include, but are not restricted to, areas such as the following:

- administration
- communication
- staff roles, skills, responsibilities
- SIG program clarification or operation
- program standards and guidelines

- interagency agreements
- evaluation
- statewide planning
- policy development ,
- · in-service training

As you determine your response, please consider ALL of the technical assistance you received, e.g., needs assessment, conferences, consultations, information services, publications, etc., and not just those services associated with the technical assistance needs listed on the previous pages.
